**Algebra I: Classwork**  
**Week of 09/14/26 Part II**

**\*\*You must show all of your work and box your answer\*\***

**Thursday, 09/17/26**

**Pg. 67 #1-4**

Solve the equation and check, each problem should be set up as a two column proof:

|                  |                   |
|------------------|-------------------|
| 1. $3x + 2 = 38$ | 2. $7 + 6y = 49$  |
| 3. $4b - 3 = 25$ | 4. $7x - 3x = 12$ |

**Friday, 09/18/26**

**Pg. 67 #33-36**

Solve and check the following equations, each problem should be set up as a two column proof:

33.  $2(x + 3) - x = 16$

34.  $3(2x - 1) + 4 = 25$

35.  $2(1 + 3x) - 1 = 4$

36.  $4(2 + 3x) = x + 48$
